

ShopZone E-Commerce

You are given: a complete stylesheet (style.css) and all required images.

Your task: write only the HTML for two pages — index.html and products.html — and link them to the provided stylesheet so that each page displays and works as described below. Do not write or change any CSS. The same stylesheet must be linked in both pages, and both pages must use the same header and footer.

Page 1 — Home (index.html)

Task 1:

Header — the brand name "ShopZone" and a navigation bar with links Home, Products, and Contact Us, with the current page shown as the active link.

Footer — quick links (Home, Products, Contact) and a copyright notice showing the current year.

Task 2: Featured Products — a section with a title showing 3—4 featured products (each with a thumbnail image, product name, and a one-line description), alongside a table that summarises related products with the columns Category, Price, Stock Status, and Action. Each Action cell holds a "View" link that opens the Products page. Below the table, a footnote showing how many products are shown out of the total catalogue, with a "View all" link to the Products page.

Task 3: Latest from ShopZone — a section showing a blog-style article: a banner with the article title and publish date, a two-paragraph summary, and a "Read Full Article" link. Show the author and category below the summary (e.g. "Written by ShopZone Editorial Team — Category: Tech Picks"), and mark at least one important keyword in the article text as highlighted. Beside the article, a "Trending Topics" box listing 5—6 linked topics.

Page 2 — Products (products.html)

Task 4: All Products — a page banner with the page title and a breadcrumb trail (Home › Products), followed by all products shown as cards. Each card includes: a product image, a category label, the product name, a star rating with review count, the current price, the original price shown struck through, and a discount percentage. Where applicable, include a status badge ("NEW" or "HOT") and a wishlist icon over the image. Each card has an "Add to Cart" button.

Task 5: Filter and Sort — a filter bar above the product grid containing:

- a Category selector: All, Electronics, Footwear, Wearables, Photography;
- a Sort by selector: Price (Low to High), Price (High to Low), Newest First, Top Rated;
- a search box to type a product name;
- a "Search" button.

Rules

- Write HTML only — do not create or edit any CSS.
- Link the provided style.css in both pages.
- Both pages must use the identical header and footer.
- The current page's navigation link must be shown as active.
- Each page must display and behave exactly as the provided stylesheet produces.
